

Sheet 1: IDEAS & BRAINSTORM

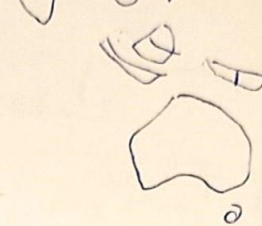

① stacked area chart

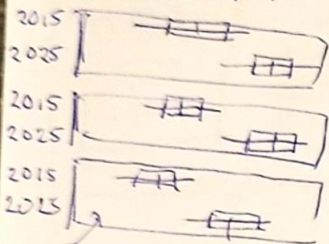

② dumbel plot safe water

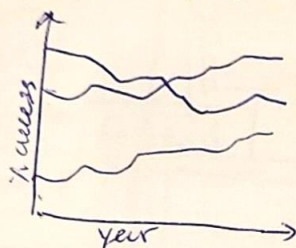

③ choropleth by country

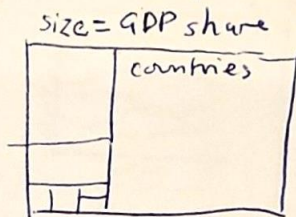

④ whisker plot small multiples

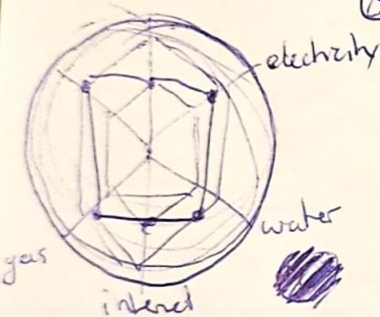

⑤ multiple line chart

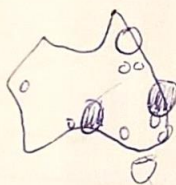

⑥ treemap

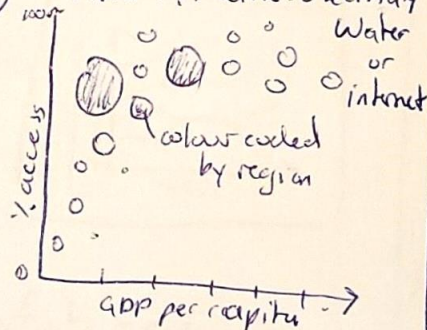

⑦ by region radar

⑧ dotted map

⑨ Filter by Metric: Electricity Water or internet

CATEGORISE

③ ⑧ map options
easy to encode data to these types

① ⑤ ~~but~~ ④ compared over time, could use a filter instead

④ ⑥ financially focussed
49 more versatile

① ⑤ similar data in ratio

QUESTIONS

- emphasize progress or inequality between regions
- guided narrative or exploratory
- how much control should users have
- can patterns be connected across metrics?

Filter

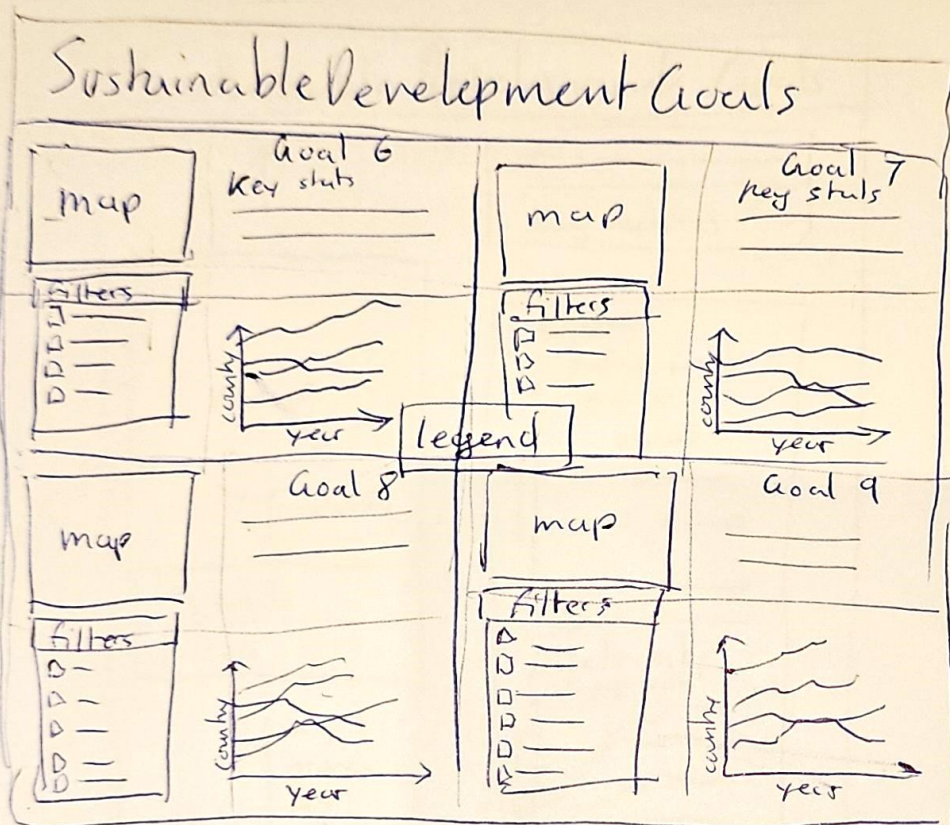

- ② shows clear improvement
 - could filter dropdown checkboxes for different countries
 - would work for different metrics
- ③ visually pleasing
 - dataset fits better
- ④ gives greater insight into how a given population is distributing a metric
- ⑤ lots of detail
 - could also filter by metric

Combine & Refine

- Data dashboard
 - world map as centrepiece
 - use UN SDG colour palette
- scroller narrative
- map centrepiece
 - simplifying scope to only electricity, water, GDP and internet
 - scrolling design with transitions
 - cohesive typography and colour system

Sheet 2: Dashboard Design

Layout

- static layout
- each quarter matches colour of its goal
- central legend shared across all maps
- while map can only show one year at a time, stacked line chart shows change over time

Focus

- Aims: to enable cross-goal comparison
- Prioritizes data completeness and accuracy over narrative flow
- Targets: ~~policy~~ policy analyst or researcher
- Task: compare countries & indicators numerically and examine change over time.

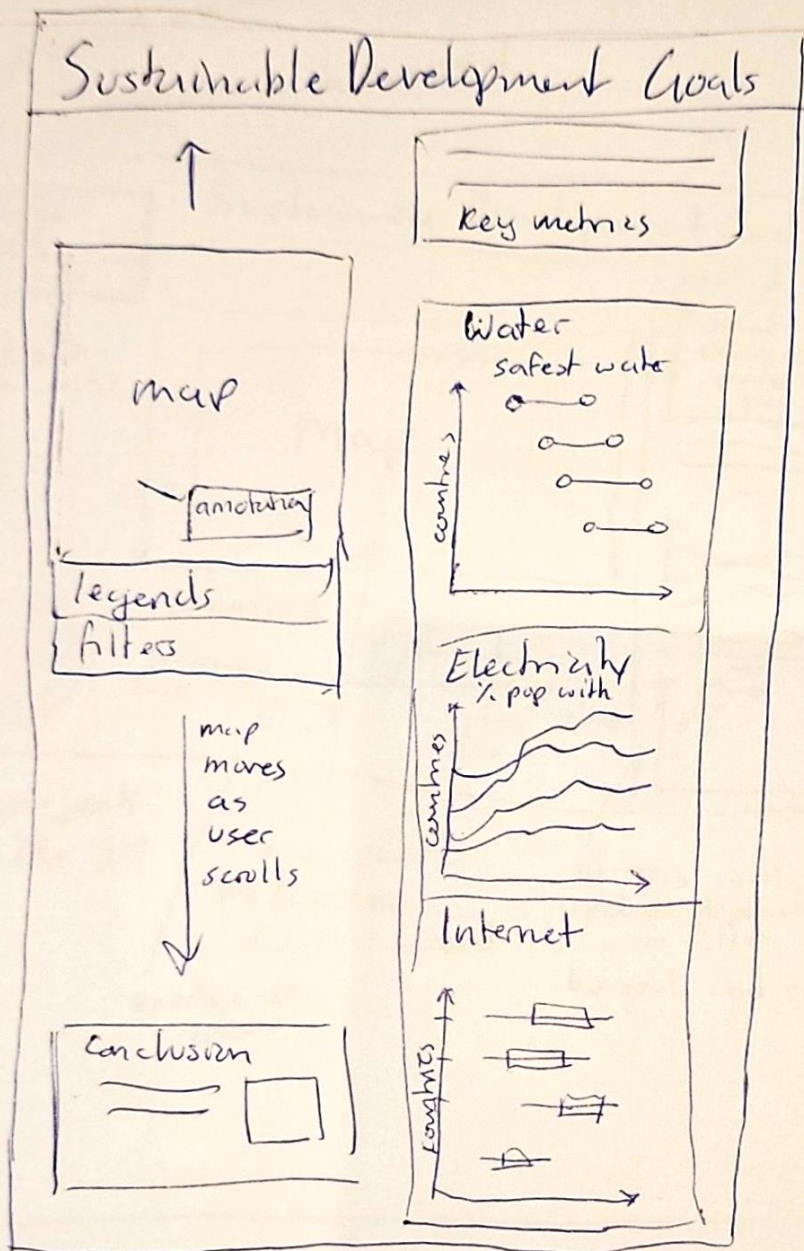

Operations

- Hover tooltip
↳ see detailed data
- compare multiple years using slider
- sort countries through filter

Discussions

- no clear overview across SDGs
- familiar structure
- might be overwhelming for general audiences
- no clear narrative, doesn't guide the viewer
- harder to ~~maintain~~ maintain impact or relevance
- easy to add additional features

Sheet 3: Narrative Scroller

Layout

Focus • Goal to deliver guided narrative
↳ accessible global data

- Audience: general public
- Less control, better flow
- Engagement & comprehension

Operations

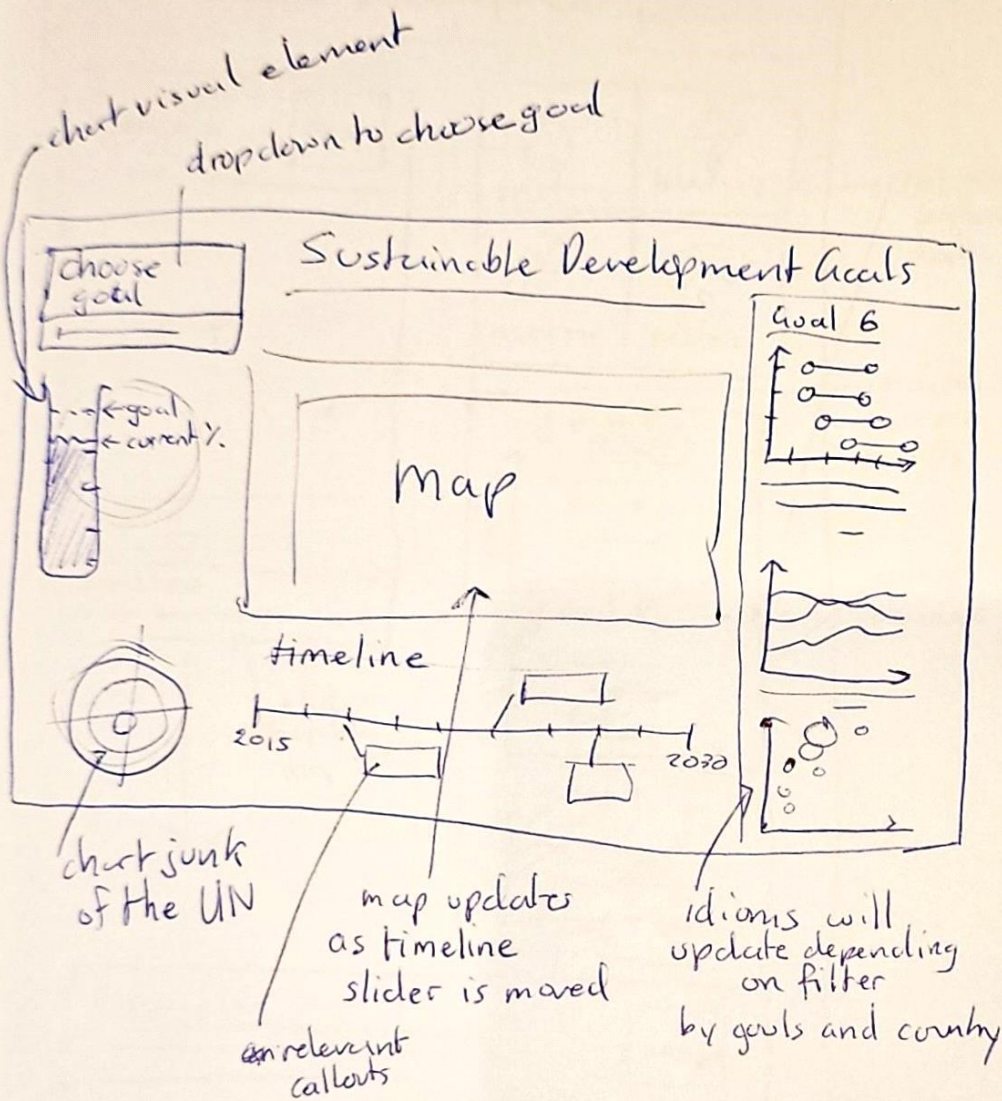

- scroll based transitions
- dynamic map update
- tooltips
- background visuals, update after scrolling
- filter countries
- filter metric

Discussions

- immersive, each goal has its time to shine
- natural thematic transitions are visually compelling
- technically complex to build compared to static
↳ good html/css/js challenge
- limited user control
- could be expanded to include all 17 goals not just a couple of them

Sheet 4: Atlas

Layout

Operations

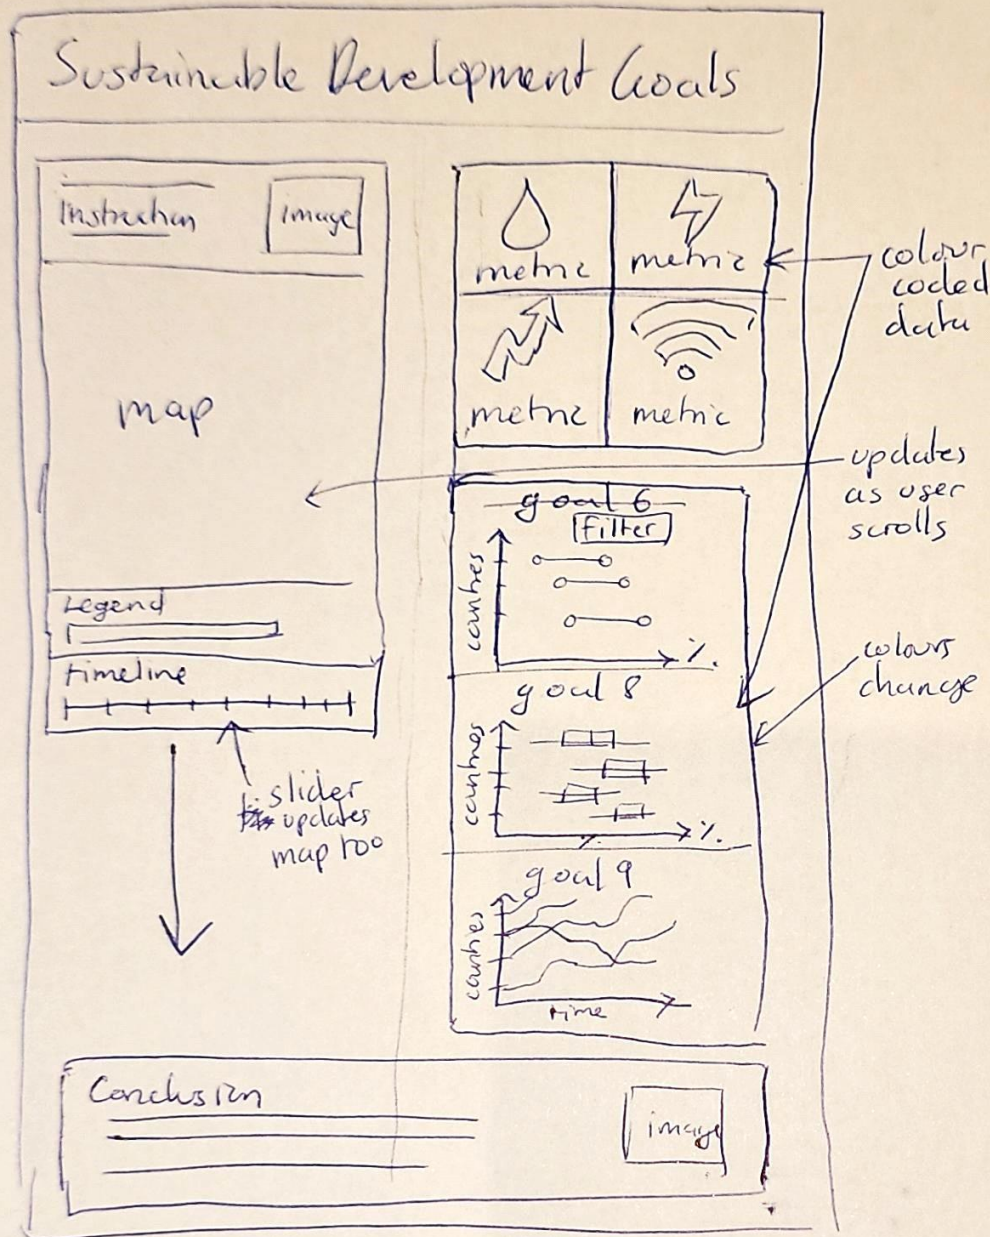

- drag time slider
- could autoplay through the years
- tooltips over marks in idioms and maps
- select a goal, change theme and dataset
- can filter countries for righthandside idioms

Discussion

- highlights map and timeline scroller
- ↳ maybe keep this element in final
- maybe look into earlier years pre-2015 for more insights
- map is the main event

- Focus
- Goal to see change over time more clearly
 - For general audiences
 - Educational tone, calm and visually immersive
 - No scrolling required
 - ↳ related chart junk

Sheet 5: Final Design

Operations

- scroll → transitions
- hovering shows metric and value
- adjusting year slider which updates map data
- filter out/in certain regions or countries
- chart tooltips

Summary

- map acts as visual anchor, this maintains spatial context
- the concept of the sustainable goals is introduced clearly
- each goal progress is visualized.
- conclusion may prompt user to explore further

Details

- HTML/CSS grid layout
- Vega-lite charts
- javascript logic
- variables for the different themes
- follows UN colour palette applied dynamically
- Data sourced from World Bank Open Data
- High contrast colours

- Focus**
- Introduces a couple of the UN sustainable development goals
 - strong themes relating to the goals covered (ie water, electricity, internet, prosperity)
 - this creates a narrative arc
 - ↳ intro → sequential progress → conclude with reflection
 - User experience with smooth transitions
